Gen AI APAC Edition Academy

Track 1 :- Build and deploy an ADK agent on Cloud Run

Github :- https://github.com/iaanchalgor/Gen-AI-Academy-APAC-Edition.git

Title

AI Chat Agent using FastAPI & GPT-3.5 (Deployed on Cloud)

Project Description

Built a cloud-deployed AI chatbot API that generates intelligent responses to user prompts using GPT-3.5. The system uses FastAPI as a backend and OpenRouter API for model integration, enabling real-time conversational interaction.

This project implements an AI agent architecture using FastAPI and OpenRouter. While not using Google ADK directly, it demonstrates similar agent capabilities such as prompt handling, response generation, and cloud deployment.

Tech Stack

- FastAPI (Backend)
- OpenRouter API
- GPT-3.5 Turbo (LLM)
- Render (Cloud Deployment)
- Python

Live Project

Base URL:
https://gen-ai-agent.onrender.com

How to Test :-

Option 1 (Browser – Easy)

`https://gen-ai-agent.onrender.com/chat?prompt=What is AI`

Option 2 (API Testing)

- Method: POST

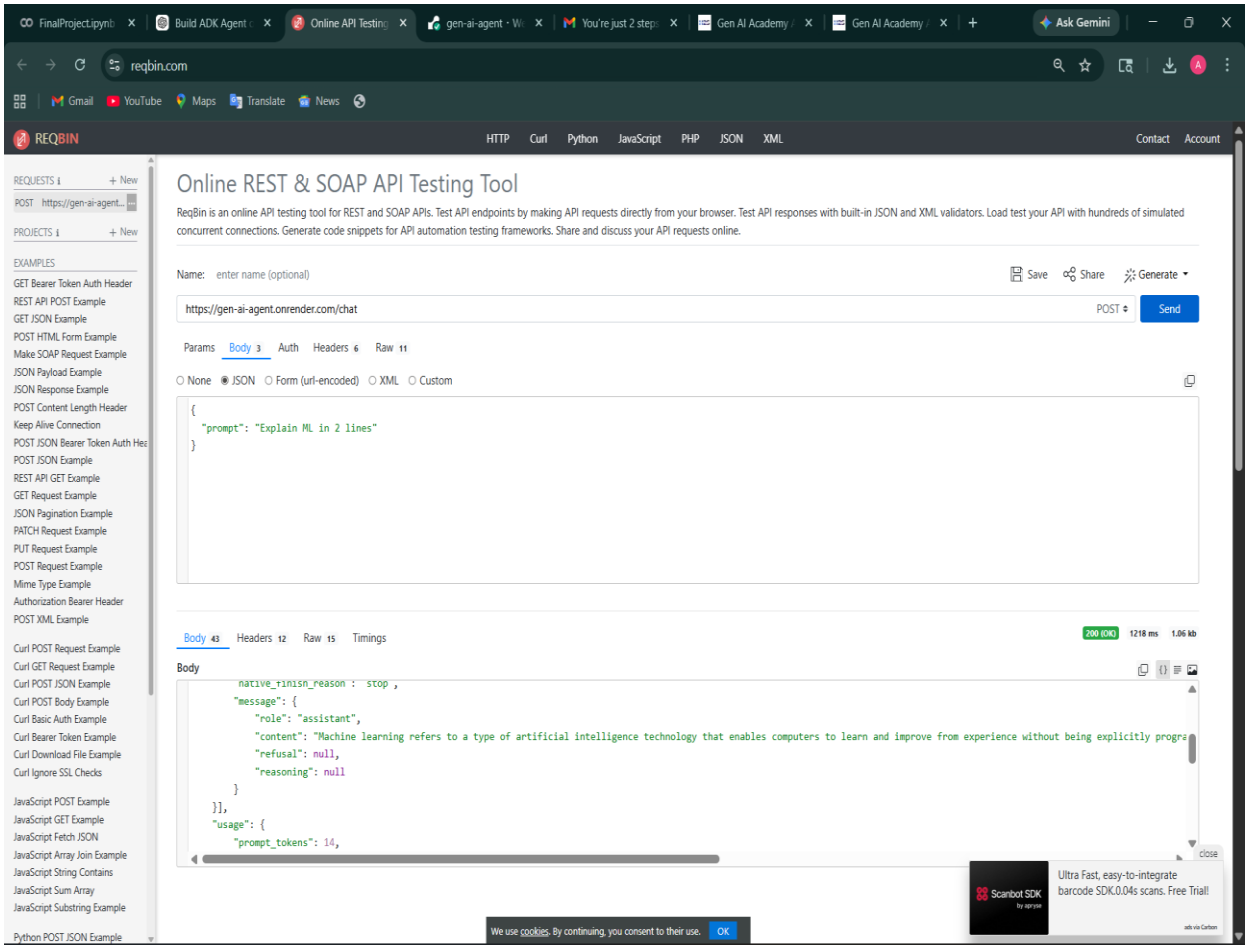
- Endpoint: `/chat`

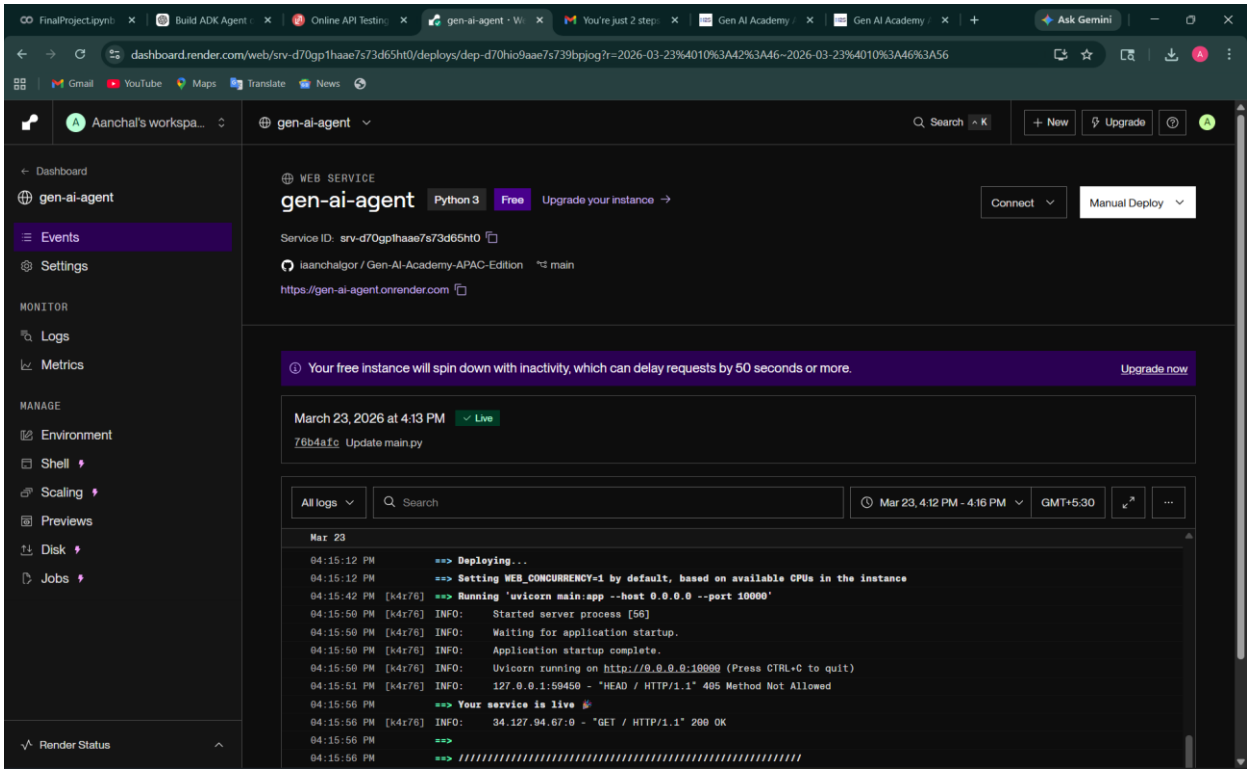
Request Body:

```
{
  "prompt": "Explain AI in simple words"
}
```

Output :-

AI stands for Artificial Intelligence. It refers to systems that can think, learn, and make decisions like humans.





Due to billing restrictions on Google Cloud, I implemented an equivalent deployment using Render.
